DISCORD APPLICATION / BOT

Apr. 2020 - Present

- Created and scaled a Discord bot application from 0 to **15k+ distinct daily active users**.
- Started as a fun project for my friends, now counts **200+ paying customers** and 300k-1M interactions per month.
- Runs on a **SpringBoot Kotlin backend split into 4 microservices** and a shared core module, with MongoDB (11M+ users) and Redis, BigQuery for data analysis, Sentry for performance and failure monitoring, Chargebee / Stripe for premium subscriptions management.
- **Developed a web dashboard** using NuxtJS, **used by 1k+ distinct users per month**.
- **Deployed on a self-managed Kubernetes cluster** on Hetzner Cloud, **cuts the costs 4x** compared to using something like AWS (I also self-host Redis). The cluster supports **auto-scaling** and has a Grafana dashboard for monitoring purposes.
- Wrote **infrastructure-as-code** with **Terraform** and **ArgoCD**. With CI/CD, all microservices are containerized and deployed to the k8s cluster, which has a staging environment for testing.
- Contributed to **JDA** (an **open-source library** for interacting with the Discord APIs) by adding support for Discord application premium entitlements management (view pull request)
- Contracted for Discord doing **Q/A testing** for their REST APIs.
- Managing an active community of 6k+ members on Discord, provided chat support for over 4k customer tickets.

BMAT

Barcelona, Spain

BACKEND - BIG DATA DEVELOPER - FREELANCE

Sep. 2025 - Present

- **Designed and developed a system** to retrieve statistics about artist's revenue, enabling to **query hundreds of GBs of data in seconds**. Used **Django** for the REST API, **DuckDB** and **Spark** for data processing, **Apache Iceberg** and **S3** as base for the data Lakehouse and multiple **AWS** services (Glue, Batch, Athena and more...).
- Had full ownership on development of new backend-focused features, while also improving the Frontend team DX by refactoring and improving the OpenAPI specs of the project.

Glowra App

Milan, Italy - Remote

BACKEND DEVELOPER - FREELANCE

Feb. 2024 - Jun. 2024

- Built and refactored multiple Python microservices involving complex business logic.
- Worked in a **fast-paced startup environment** where communication and independence was key.

Projects

NATIVE MOBILE APP

Aug. 2022 - Present

- Designed and developed a **native Android app** using **Jetpack Compose** and an **iOS app** with **SwiftUI**. Includes features like **offline first support** (with Android Room, Datastore and SwiftData) and **real-time data via websockets**. Published on the Google Play Store and App Store.
- Built a **REST API** using Kotlin with **Ktor**, rolled my own authentication system, designed the database schema to efficiently store data in **PostgreSQL**, improved performance by caching critical data in Redis.
- Implemented **real-time data and collaboration** between users with **websockets**. **RabbitMQ** is used as the main dispatcher of events, thus ensuring the service is horizontally scalable on k8s.
- Integrated **Prometheus** and **Grafana** for performance monitoring, and **BigQuery** for data analysis.
- Implemented **CI/CD** using **Docker** and **CircleCI**. Deploying the monolith backend via IaC (Terraform + ArgoCD for k8s).

NATIVE DESKTOP APP

Sep. 2023 - Nov. 2023

- Built and shipped a native macOS and Windows desktop app for the [JetBrains Kotlin Multiplatform Contest](#). Reached **4k+ downloads** across the stores.
- The code is divided into **4 shared Kotlin modules**, another module for the Windows app which uses **Compose Multiplatform** for the UI, and a SwiftUI project for the macOS app.
- Used Conveyor for building and packaging the app for the App Store and Microsoft store, and GitHub actions for CI/CD.

Education

University of Trento, DISI

Trento, Italy

B.S. IN COMPUTER SCIENCE

Sep. 2022 - Mar. 2026

- **Average grade 27/30 - GPA 3.7**
- Relevant courses: Computer programming 30H/30, Functional programming 28/30, Advanced programming 30H/30, Software engineering 29/30, Databases 30/30, Networking 29/30, Operating systems 28/30, Mobile development 30H/30
